Assignment.1

Coffee Order Form

Customer Name:

Phone Number:

Coffee Type:

Cup Size

☐ Small

☒ Medium

☐ Large

Extras

☒ Sugar

☒ Whipped Cream

☒ Vanilla

Design a coffee order user interface using JavaFX that includes input fields, options, and interactive behavior.

❖ Requirements:

- The root node must be a GridPane.
- The interface should include 3 TextFields:
 - Customer Name.
 - Phone Number.
 - Coffee Type.
- Add RadioButtons to choose the cup size (Small, Medium, Large). Note that only one RadioButton should be selected.
- Add CheckBoxes for extras: Sugar, Milk, Whipped Cream, Vanilla.
- Include OK and Cancel buttons.

❖ UI Styling Requirements:

- Include OK and Cancel buttons.
- Change font type, size, weight (bold), and style (italic) for some labels like the title.
- Set the Scene size and control the width of the TextFields.
- Use colors for texts and title to enhance readability.
- Set a background color for the whole scene that is user-friendly.
- Add a border to the GridPane with a style and color of your choice.
- Set a custom background for the OK and Cancel buttons.
- Add Tooltips for any UI elements you choose.
- Change the cursor to a hand when hovering over the buttons.
- Set a Stage title, e.g., "Coffee Order Form".
- Disable resizing of the Stage window.
- Consider the size of the Scene and the size of the TextField as shown in front of you.

❖ Required Actions:

- On OK button click:

If all three fields are filled, display a green success message to the left of the OK button:

The coffee order was placed successfully!

Size: Medium

Extras: Sugar, Milk

If any field is empty, show a red error message:

Please fill in all required fields.

- On Cancel button click:

Clear all input fields and remove any message.

- On selecting a cup size or any extra:

Show the selected values alongside the success message.

Note:

Any duplicate files are 0 for both parties.

Any solution using AI, ChatGPT or otherwise, is 0.
